520 CFM In-line Exhaust blower (outside vent only)	Optional
Cooking Surface Light, Night Light	Yes
"Feather Touch" Tempered Glass Oven Control Panel	Yes

RANGE HOOKUPS

Electrical Cords and Gas Line Connections

Electrical receptacles and gas piping should be located in the center of the opening, approximately 6" above the floor.

RANGE EXHAUST LOCATION

(See owner's manual for more detail.)

The rectangular duct opening in the back of the cabinet is centered 62 ¼" from the floor (60 ¼" with optional short legs) and 15 ¾" in from the left side of the range cooktop. If you are ducting the exhaust into a rectangular duct in the wall behind the stove, the drywall opening should be 3 ¾" X 10".

If you require an inline or outside wall-mounted blower, please specify when ordering the range (it will be built differently).

If you wish to create an antique "stovepipe" look, Elmira can cut a round hole in the top of the upper cabinet, to which your stove (vent) pipe can be attached. This option requires the optional inline blower.
